

Assignment -2

Python Programming

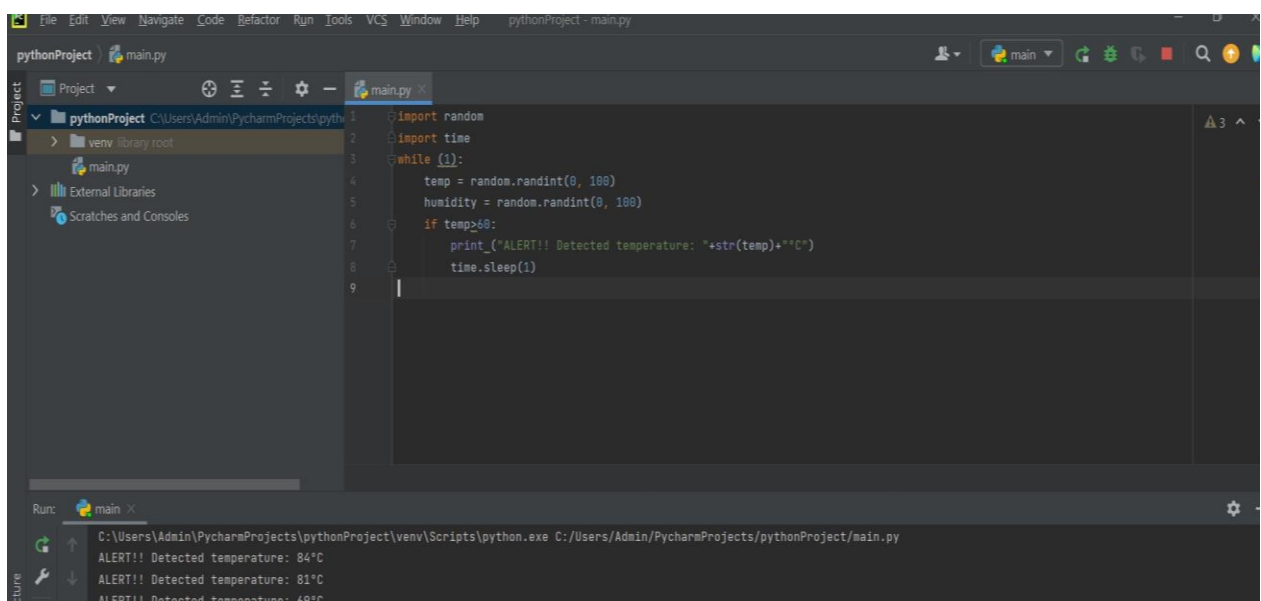

NAME	MATHAN KUMAR T
Maximum Marks	2 Marks

Question:

Build a python code, assume u get temperature and humidity values (generated with a random function to a variable) and write a condition to detect an alarm in case of high temperature continuously.

Python Code:

```
import random
import time
while (1):
    temp = random.randint(0, 100)
    humidity = random.randint(0, 100)
    if temp>60:
        print ("ALERT!! Detected temperature: "+str(temp)+"°C")
        time.sleep(1)
```

The screenshot displays the PyCharm IDE interface. The main editor window shows the Python code from the previous block. The left sidebar contains the Project tool window, showing the project structure with 'pythonProject' and 'main.py'. The bottom panel shows the Run tool window, which displays the command used to execute the script and the output of the program. The output shows three lines of 'ALERT!! Detected temperature: 84°C', 'ALERT!! Detected temperature: 81°C', and 'ALERT!! Detected temperature: 69°C', indicating that the program is running and detecting high temperatures.

```
