QUESTION

Please create circuit with piezo alarm, PIR sensor, temperature sensor with below functionalities:

- ** Alarm should sound in one manner if temp is above 60 C
- ** Alarm should sound with another frequency if motion is detected in PIR sensor

PROGRAMING:

```
void setup()
{
 Serial.begin(9600);
 pinMode(2,INPUT);
 pinMode(13,OUTPUT);
void loop()
{
 double data = analogRead(A3);
 double n = data/1024;
 double volt = n*5; // because connected to 5v
 double off = volt - 0.5;
 double temperature = off*100;
 int a = digitalRead(2);
 if (a == 1){
 tone(13,10);
  }
  else if(temperature > 60){
  tone(13,20);
 }
 else{
noTone(13);
}
}
```
